The name AutoCAD Serial Key originated from the mainframe application Autocad. The symbol in the logo represents the circle that is traced around the outside of the operator's drawing pad during the drafting process. Many trademarks have been claimed by Autodesk for its software products, including Autocad and AutoCAD. Although this page lists all claimed trademarks for AutoCAD, the actual list of claimed trademarks for all of Autodesk's software products can be found at the United States Patent and Trademark Office Trademark database. Etymology The original name of the application was Autocad, pronounced "auto-cad" (the "cad" refers to the symbol for the circle traced around the drafting table to create the design). The symbol for AutoCAD, a circle with two lines (a "V") drawn around it, also was inspired by the AutoCAD drawing-table system.[1] For this reason, the earliest version of AutoCAD did not have the AutoCAD logo on the program's title bar. History In the 1970s, Autocad and the AutoCAD drawing-table system were used to prepare industrial drawings. However, CAD software had not yet become a commercial product, so the first Autocad release, labeled as Autocad "AutoCAD, version 1.0" (v1.0), was only for private use. Version 1.5, released in 1984, was the first version of AutoCAD available for commercial use. On December 8, 1982, the first release of AutoCAD was announced as AutoCAD, version 1.5 (v1.5) for the Apple II microcomputer. In 1983, the first release of AutoCAD was published for the IBM PC. In 1987, Autocad for Windows was introduced, and in 1992, a graphic user interface (GUI) was introduced, with version 2.0 (v2.0). Between 1997 and 2001, Autocad for Windows was known as "AutoCAD LT", which is the name used in some of the user manuals, even though it is not true for the software itself. When the first release of AutoCAD 2007 was published, it was known as Autocad 2009 (v2009). The first release of AutoCAD 2007 introduced the ribbon menu system, and the product name was changed to Autocad 2009, but this name has

Inventor, Fusion 360 and 3ds Max also support exporting to the file format.p3dm. In addition, Autodesk SketchBook Pro can export to.dxf. Autodesk AcceleRite, which is a proprietary software for creating point clouds, can also export to.pcd and.gpx files. Finally, Autodesk Edgecam can export the.svf file format, which is used to model 3D objects, to Autodesk 3ds Max. Autodesk Edgecam supports the.3dm file format as well. Autodesk Fusion 360, Autodesk Inventor, Autodesk Fusion 360 and Autodesk Inventor all support the.stl file format for creating 3D prints. Autodesk Fusion 360 and Autodesk Inventor support the.igs file format for creating 3D models. Search form The Budget and the Dance On Tuesday, December 12, DC residents will have the opportunity to participate in a very special budget referendum. At a special city-wide session at the Library of Congress, the DC City Council will consider a proposed revision to the current DC budget. In short, the city wants to spend $8.3 billion (20% of total DC revenues) on "the critical priorities of the District's capital plan." While the specifics of this plan are still in flux, they include a $5.8 billion dollar budget for the DC Water and Sewer Authority, and a $2 billion dollar plan for a new hospital, or "renovate, fix, and replace" (as DC Mayor Vincent Gray put it). While the details of the plan are unknown, the idea is to fund infrastructure that will benefit the District for many years to come. While this might sound great, the plan is vague, and by no means the only way to improve the quality of life in DC. After an unprecedented wave of local ballot initiatives in the past few years, this budget may be one of the last chances to create policies that will shape the future of our city. Thus, it is important to make your voice heard on this issue, and make sure to vote on Tuesday. Of course, the city's current operating budget is insufficient, but instead of going down the road of protecting and funding existing services, the city should be looking towards the future. The city has over 50,000 vacant and abandoned properties, which is a scourge on the city and, most importantly, an open door to crime. These properties should be turned into subsidized, affordable housing units. Yet, there is currently no plan in place to do this. Furthermore, DC has a chronic shortage of safe and affordable childcare options. Despite a recent report showing that DC has a childcare-to-employment gap of about 80%, DC has no plan to change this. In the meantime, DC spends $4 million per year on childcare,
